

COFDM stand alone modulator

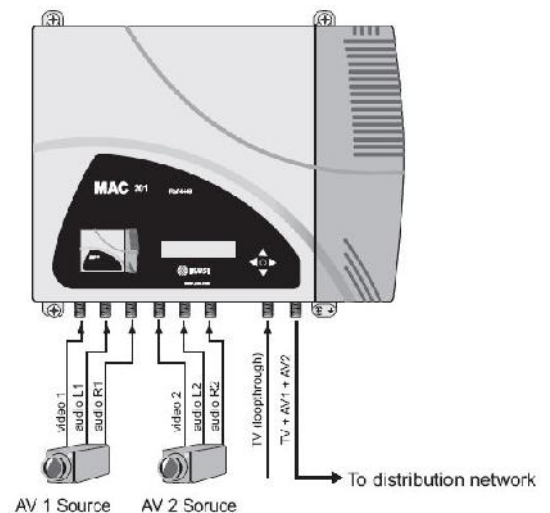

Our new MUX generator enables conversion of analogue video signals such as CCTV or door entry system cameras etc) to digital using a spare channel on Freeview!

For the first time! A solution to analogue video input problems in an all digital world. The MAC 201 has been specifically configured into a low cost stand alone case, designed to convert two existing A/V outputs from any source into a single 'Freeview' compatible digital service. This service contains the two channels that appear on all TV's in the system exactly where and how you want them.

The MAC 201 offers the landlord the means to retain or retrieve the existing door entry or CCTV camera services otherwise lost or only available by cycling in and out of different set top boxes or tuners. As TV sets without analogue tuners become more common this will no longer be an option.

The simple set-up screen allows a whole host of parameters to be altered including the channel number and title. This is accessible with the on-board programmer or by a simple laptop via the internet (no additional software required)

- **COFDM (Digital TV) RF output.**
- **LCN (logical Channel Numbering) supported.**
- **Password protected settings.**
- **RCA phono source inputs x 2.**
- **UHF Combining "Loop through".**
