

# Speech Transfer Systems

## All induction speech transfer systems installed by Astbury comply with the Equality Act (DDA).

With many more security devices being installed in banks, building societies, council offices, in fact anywhere the public has to talk to counter staff it presents a communication problem.

We feel that the whole issue of voice transfer is about transferring individual voices through any type of obstruction, screen, door, window, etc; in the clearest way possible.

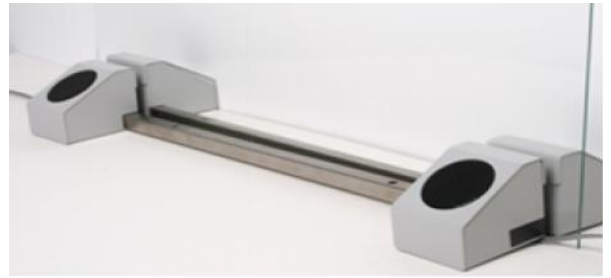

For example just increasing the volume of speech and transferring it often leads to distorted or muffled sound. This in turn may create tension and can increase the chances of confrontation.

Astbury always endeavour to make speech sound natural, as if the barrier to clear speech does not exist!

Astbury speech transfer systems include a built-in induction loop, and are Disability Discrimination Act (Equality Act) compliant.

We can supply, install and commission both fixed and self-contained portable systems.

- Both fixed and portable systems available.
- All systems fully Equality Act (DDA) compliant.
- Professional installation assured.
- At risk establishments - Garages, Night Stores, and Taxi offices.
